2013 – Present ■ **Site Primary Investigator**. The South Texas Research Organizational Network Guiding Studies on Trauma and Resilience, or STRONG STAR, is a multidisciplinary and multi-institutional research consortium funded by U.S. Departments of Defense (DoD) and Veterans Affairs (VA) to develop and evaluate the most effective early interventions possible for the detection, prevention, diagnosis, and treatment of combat-related posttraumatic stress disorder (PTSD) and related conditions in active-duty military personnel and recently discharged veterans. Supervise over 20 funded protocols.

STRONG STAR is strategically based at Fort Hood, Texas, which contains one of the largest concentrations of Operation Iraqi Freedom (OIF)/Operation Enduring Freedom (OEF)/Operation New Dawn (OND) veterans, the DoD's largest military medical complex, state-of-the-art trauma research facilities, and established military, VA, and civilian institutional collaborations. Not only does this pair researchers with the number of military personnel necessary for large-scale studies, but it also means that STRONG STAR investigators' expertise and innovative treatment programs are helping where they are needed most.

More than 125 researchers and clinicians working with STRONG STAR are conducting a broad array of clinical, exploratory, and preclinical trials and utilizing specialized research cores to assess novel delivery methods of evidence-based PTSD treatments. These delivery methods have been specially adapted to meet the unique needs of military and VA populations. Simultaneously, STRONG STAR is striving to learn more about the biological factors involved in PTSD development and recovery; the influence of co-occurring physical and psychological ailments; and the interaction of cognitive-behavioral therapies and pharmacologic treatments. Ultimately, STRONG STAR is focused on reducing the suffering of our nation's wounded warriors. STRONG STAR investigators want to help our returning war fighters to continue living healthy, productive lives and to prevent the development of chronic PTSD and related problems in a new generation of veterans.

2013 ■ **Dissertation Committee/Expert Reader** for Fielding Graduate University (Santa Barbara, CA) Clinical Psychology student Allah Sharrieff, "The relationship between war-related traumatic brain injury and self-concept".
